Re: **McDay Holdings Septage Receiving Plant Critical Area report**

Mr. Gilday,

Please see the attached files.

Our consultant has completed their review of the critical area report for the McDay Septage facility. They believe more information is required to support the conclusion that wetlands are not present on the site.

The Department of Ecology also responded to the notice of application for this project. DOE believes wetland data sheets are necessary for a proper determination.

Stanwood Municipal Code 17.125.040 also states wetlands shall be designated in accordance with the approved federal wetland delineation manual and applicable regional standards (WAC 173-22-035).

- **A wetland delineation using the Routine Determinations method described by the Corps Wetland Determination manual and the local Regional Supplement are necessary to complete the review of the critical areas component of this project.**

If you have any questions or I can be of any other assistance, please contact me at erick.aurand@ci.stanwood.wa.us or (360) 629-2181 ext 4510.

Sincerely,

Erick Aurand
City Planner
